

Dear All,

I hope you, your family and friends are keeping safe and well.

Ireland's Climate Action Plan, released in 2019, and the National Energy & Climate Plan, released in 2020, has set a target for 936,000 electric vehicles by 2030. While it is envisaged that the majority of electric vehicle charging will take place at home, public on-street chargepoint infrastructure will also be required to meet future electric vehicle user needs.

This consultation will present an overview of new solutions for connection of public on-street electric vehicle charging infrastructure to the distribution system that are consistent with current legislation and present possible new interface solutions to facilitate both high powered (22 kW) and low powered (7 kW) chargepoints.

This publication is now open for consultation and is available to view [here](#)  
We welcome any feedback you may have and this can be submitted via [innovationfeedback@esbnetworks.ie](mailto:innovationfeedback@esbnetworks.ie).

Please note that the deadline for receipt of feedback on the strategy is 5pm on Monday, 18th January 2021.

Regards and thanks,

Pádraig
